

The figure consists of a dense grid of data points. The vertical axis is divided into approximately 10 major segments by horizontal dashed lines. The horizontal axis is divided into approximately 10 major segments by vertical dashed lines. The data points are represented by small, dark gray or black dots. These dots form several distinct patterns: a central rectangular area filled with a regular grid of dots; a series of concentric, roughly circular arcs extending from the center; and several diagonal bands of dots sloping upwards from left to right. There are also some irregular, jagged patterns and a few isolated dots scattered outside the main clusters.
